

CS 170 Midterm 1

Write in the following boxes clearly and then double check.

Name :

SID :

Exam Room :

- ☐ Wheeler 0150 ☐ Pimentel 1
☐ Dwinelle 145
☐ Other (Specify):

Name of student to your left :

Name of student to your right :

- The exam will last 110 minutes.
- The exam has 12 questions with a total of 120 points. You may be eligible to receive partial credit for your proof even if your algorithm is only partially correct or inefficient.
- Only your writings inside the answer boxes will be graded. **Anything outside the boxes will not be graded.** The last page is provided to you as a blank scratch page.
- Answer all questions. Read them carefully first. Not all parts of a problem are weighted equally.
- Be precise and concise.
- The problems may **not** necessarily follow the order of increasing difficulty.
- The points assigned to each problem are by no means an indication of the problem's difficulty.
- The boxes assigned to each problem are by no means an indication of the problem's difficulty.
- Unless the problem states otherwise, you should assume constant time arithmetic on real numbers. Unless the problem states otherwise, you should assume that graphs are simple.
- If you use any algorithm from lecture and textbook as a blackbox, you can rely on the correctness and time/space complexity of the quoted algorithm. If you modify an algorithm from textbook or lecture, you must explain the modifications precisely and clearly, and if asked for a proof of correctness, give one from scratch or give a modified version of the textbook proof of correctness.
- Assume the subparts of each question are **independent** unless otherwise stated.
- Please write your SID on the top of each page.
- Good luck!

1 Asymptotic Analysis (4 points)

For each pair of functions f and g , specify whether $f = O(g)$, $g = O(f)$, or both.

f	g	$f = O(g)$	$g = O(f)$
$n^3 + \log(n) + 17$	$n^2 + 7 \log(n)$	<input type="radio"/>	<input type="radio"/>
$n^2 + 4^n$	$n^4 + 2^n$	<input type="radio"/>	<input type="radio"/>
$\log(n)$	$\log(n^2)$	<input type="radio"/>	<input type="radio"/>
$3^{\log_2(n)}$	n^2	<input type="radio"/>	<input type="radio"/>

2 Runtime Analysis (6 points)

Consider the following piece of code:

```

Function what( $n$ ) {
    If ( $n < 2$ ):
        return;

    what( $n/3$ )
     $k = \sqrt{n}$ 
    for  $i = 1, 2, 3, \dots, k$  {
        for  $j = 1, 2, 3, \dots, k - i$  {
            print BLAH
        }
    }
    what( $n/3$ )
    what( $n/3$ )
}

```

Let $T(n)$ denote the runtime of the *what*(n).

- Write the recurrence relation for $T(n)$.

- Solve the recurrence relation for $T(n)$ (give the tightest bound $O()$ possible).

3 Connectivity in Graphs (8 points)

- (a) Perform DFS in the graph, breaking ties alphabetically, and write down the pre and post numbers.

Vertex v	$pre[v]$	$post[v]$
A		
B		
C		
D		
E		
F		
G		
H		
I		
J		

(b) Mark all cross edges if any.

Edge	Fill if cross edge	Edge	Fill if cross edge
$A \rightarrow B$	<input type="radio"/>	$D \rightarrow H$	<input type="radio"/>
$A \rightarrow E$	<input type="radio"/>	$E \rightarrow H$	<input type="radio"/>
$B \rightarrow E$	<input type="radio"/>	$G \rightarrow F$	<input type="radio"/>
$B \rightarrow F$	<input type="radio"/>	$G \rightarrow J$	<input type="radio"/>
$C \rightarrow B$	<input type="radio"/>	$H \rightarrow D$	<input type="radio"/>
$C \rightarrow G$	<input type="radio"/>	$H \rightarrow I$	<input type="radio"/>
$D \rightarrow A$	<input type="radio"/>	$I \rightarrow J$	<input type="radio"/>
$D \rightarrow E$	<input type="radio"/>	$J \rightarrow G$	<input type="radio"/>
		$J \rightarrow F$	<input type="radio"/>

(c) In the following table, list its strongly connected components (SCCs), in the alphabetical order of the smallest vertex contained (e.g. AEF precedes BCD).

SCC 1	<div style="border: 1px solid black; height: 60px; width: 180px;"></div>	SCC 2	<div style="border: 1px solid black; height: 60px; width: 180px;"></div>
SCC 3	<div style="border: 1px solid black; height: 60px; width: 180px;"></div>	SCC 4	<div style="border: 1px solid black; height: 60px; width: 180px;"></div>
SCC 5	<div style="border: 1px solid black; height: 60px; width: 180px;"></div>	SCC 6	<div style="border: 1px solid black; height: 60px; width: 180px;"></div>
SCC 7	<div style="border: 1px solid black; height: 60px; width: 180px;"></div>	SCC 8	<div style="border: 1px solid black; height: 60px; width: 180px;"></div>

4 Bellman-Ford Algorithm (6 points)

Consider the execution of Bellman-Ford algorithm on the following **directed** graph with **positive** edge weights and the source node S . Edges of the graph are labelled $E1, E2, E3, E4$ and $E5$.

Here is the sequence of update operations carried out by the algorithm.

Iteration Number	Updated Edge
1	E1
2	E2
3	E3
4	E4
5	E5
6	E1
7	E2
8	E3
9	E4
10	E5
11	E1
12	E2
13	E3
14	E4
15	E5

1. What is the earliest iteration after which $\text{dist}[A]$ (distance to A) is guaranteed to be correct? If $\text{dist}[A]$ is first set to the correct value on iteration x , write x .

2. What is the earliest iteration after which $\text{dist}[B]$ (distance to B) is guaranteed to be correct? If $\text{dist}[B]$ is first set to the correct value on iteration x , write x .

3. What is the earliest iteration after which $\text{dist}[C]$ (distance to C) is guaranteed to be correct? If $\text{dist}[C]$ is first set to the correct value on iteration x , write x .

6 Short Answers (18 points)

Note: all subparts are independent from one another.

1. What is the Fourier transform of the vector $[1, 1, 0, 0]$?

2. Let $n > 16$ be a power of 2. Let $\{\omega_1, \omega_2, \omega_3, \dots, \omega_n\}$ denote all the n^{th} roots of unity. How many distinct numbers are in the set: $\{\omega_1^4, \omega_2^4, \dots, \omega_n^4\}$?

3. Let *InverseFFT* denote the inverse Fourier transform. Suppose

$$\text{InverseFFT}([a_0, a_1, a_2, a_3, a_4, a_5, a_6, a_7]) = [0, 0, 2, 0, 0, 0, 0, 0].$$

What is

$$\text{InverseFFT}([a_0^3, a_1^3, a_2^3, a_3^3, a_4^3, a_5^3, a_6^3, a_7^3]) =$$

4. Let *Select*(S, k) denote the randomized Select algorithm that finds the k^{th} smallest number in a set S .

Consider the execution of *SELECT*($S, n/2$) on a set S of size n . Let R denote the number of pivots chosen by the algorithm before it terminates.

- (a) In the best case, the value of R (up to constant factors) =

- (b) In the worst case, the value of R (up to constant factors) =

- (c) The expected value of R (up to constant factors) =

5. The greedy algorithm on a HornSAT instance returns the following assignment:

$$x_1 = \text{True}, x_2 = \text{False}, x_3 = \text{True}, x_4 = \text{False}, x_5 = \text{True}$$

For each of the following clauses, indicate whether adding it will necessarily make the instance unsatisfiable. (i.e., there exists no assignment that satisfies all the original clauses *and* the new added clause) Each sub-part below is independent of the other.

- (a) $x_1 \implies x_2$

☐ may be satisfiable ☐ necessarily unsatisfiable

- (b) $\overline{x_1} \vee \overline{x_3}$

☐ may be satisfiable ☐ necessarily unsatisfiable

- (c) $\overline{x_5}$

☐ may be satisfiable ☐ necessarily unsatisfiable

7 DFS Traversal (5 points)

The DFS traversal of a graph depends on the order in which the vertices are chosen. Consider the following graph:

Suppose we execute a DFS traversal of the above graph, choosing the vertices in arbitrary order (not necessarily lexicographic). Mark each of the following outcomes as possible or impossible.

1. $pre[A] < pre[B] < pre[C] < pre[D] < pre[E] < pre[F]$

☐ possible ☐ impossible

2. $pre[A] > pre[B] > pre[C] > pre[D] > pre[E] > pre[F]$

☐ possible ☐ impossible

3. $post[A] > post[B] > post[C] > post[D] > post[E] > post[F]$

☐ possible ☐ impossible

4. $post[A] < post[B] < post[C] < post[D] < post[E] < post[F]$

☐ possible ☐ impossible

5. $pre[F] < pre[C] < pre[D] < pre[E] < pre[A] < pre[B]$

☐ possible ☐ impossible

8 Huffman (6 points)

Assume we have a length 100 string consisting of the characters $\{A, B, C, D, E\}$. We know the string contains 30 A 's and 40 B 's.

For each of the trees shown above, indicate whether the tree is a possible Huffman encoding for some choice of frequencies of other characters C, D and E . Unlabelled leaves may represent any character.

- Tree 1

☐ possible

☐ impossible

If impossible, justify your answer below.

- Tree 2

☐ possible

☐ impossible

If impossible, justify your answer below.

- Tree 3

☐ possible

☐ impossible

If impossible, justify your answer below.

- Tree 4

☐ possible

☐ impossible

If impossible, justify your answer below.

3. What is the runtime of your algorithm?

This page left intentionally blank
for scratch purposes.
